

Products: RB (formerly BetaCell)

Designed for Automotive NVH applications

The Gusmer-Decker RB is the system of choice for noise, vibration and harshness (NVH) and automotive body cavity sealing applications. Typically attached to a chemical bulk storage system with automatic day tank filling, the RB is designed to meet the rigorous standards of automotive car body in-plant, on-line applications.

Features and Benefits

- Stand alone integrated unit with 35 ft of hose and GX-15 mixing head
- One button AutoStart feature
- Open frame construction with small footprint
- Accurate and reliable continuous delivery metering pumps
- Recirculation with small, lightweight mixing head
- Target engineered PLC control system
- Integrated supply system
- Accurate heating system with Gusmer hybrid heater
- Mass style flow meters
 - Operational performance
 - Accurate shot size control
- Direct impingement, high velocity GX-15 high-pressure mixing head
