

Products: RX (formerly RimCell RX)

For polyurethane processors demanding optimum performance and flexibility

Gusmer-Decker RimCell RX Series metering and dispensing units are designed to process any commercially available unfilled non-corrosive chemical system up to 3000 cps. RimCell RX is the system of choice for polyurethane processors who demand optimum performance and flexibility.

Features and Benefits

Flexible

- Can be configured with different sized metering pumps to accommodate different ratios and outputs
- Standard model throughputs range from 50 to 200 lbs/min
- Other models available for throughputs outside of this range

Modular design

The modular design and flexible control systems let you install auxiliary components such as:

- Temperature control units
- Multi-station ringline – allows you to connect several mixing heads to a single metering unit
- Color dosing units
